The Back to the Future Tour

At: Dartmouth House, Charles Street, London W1

On: July 7th 2005

The time has come for the launch of a new Multi Asset Wealth Preservation Platform

The Directors of Product Innovations invite you to a
private review of the Overture Global Multi-Asset Funds.

Available from August 2005,

Orchestrated by Product Innovations and Powered by Frontier Capital Management...

The objective of the funds is to deliver a multi asset globally diversified portfolio (MAP) that targets stable absolute returns through all economic cycles. The fund will invest in eight major asset classes and because of low correlation between these asset classes, creates a diversified low risk portfolio.

The MAP Funds provide this diversification by investing in global equities and bonds, commodities, real estate, and emerging markets; giving investors the opportunity to access the widest range of investments in a single, low-cost fund.

The seminar will focus on Modern Portfolio Theory and how an investor can benefit from a classic Nobel prize winning strategy. It will also discuss how Frontier has developed this classic investment theory and developed the MAP, available in the UK, through the Overture family of funds.

Those attending will be invited to participate in the final design of the structured products and will have the unique opportunity to talk to one of the most innovative fund managers in the UK.
